BASHNAV quick reference

Version 1.0 — one icon, all the tools behind it.

The six

`celnav`	celestial navigation: sight reduction and the fix
`colregs`	the rules of the road, lights, collision avoidance
`tides`	tide prediction, 8,334 stations
`deck-log`	the boat's records: deck, engine, provisions
`weather`	read your own barometer
`drill`	a study machine — browser build only

At a prompt

`bashnav` prints the list; pick a number. It looks for each tool next to itself, then in `bin/` beside it, then `~/Documents`, `~/bin`, the current directory, and finally your `PATH`.

In a browser

1. Open a tool.
2. **Share → Add to Home Screen.**
3. Repeat per tool — each is its own page, so each gets its own icon.

No installer, nothing to update by hand: a tool reloads itself when its page changes.

Prove offline at the dock

1. Open every screen of the tool, online, once.
2. Turn the network off.
3. **Close it completely and relaunch from the icon.**
4. Open the same screens again.

A tool that was only ever opened online has shown you nothing about offline.

The three modes

DAY · DARK · NIGHT, shared across the whole suite, night by default, and night to day takes a deliberate hold. A bright panel costs a dark-adapted eye about twenty minutes.

The standing caution

Training aids and working tools, **not a substitute for judgement**. Where any of these and the published rules, almanac or chart differ, the published source is right and this is wrong.
