DECK-LOG quick reference

Version 1.1 — append-only, UTC, offline.

Commands

`deck-log`	the menu
`deck-log entry`	the three-hourly entry
`deck-log wx`	a weather observation on its own
`deck-log log [n]`	the last n entries
`deck-log inspect`	run the engine checklist
`deck-log job`	work done, and the part it used
`deck-log open`	what is outstanding
`deck-log spares`	what is aboard
`deck-log shopping`	the list for the next port
`deck-log equip` / `part`	the registry
`deck-log stocktake`	count the locker
`deck-log correct`	correct an earlier entry, properly
`deck-log day|night|plain`	colour mode
`deck-log about` / `version`	

The record

```
YYYY-MM-DDThh:mmZ|type|key=value|...|~
```

`|~` is the completeness marker: without it the record is unfinished. `|` is percent-encoded inside values, so `|~` appears nowhere else.

Types: `nav` deck · `wx` weather · `eng` engine · `pro` stores · `inv` stocktake · `cor` correction · `mrg` merge · `cel` celestial · `tid` tide · `con` contact · `chart` chart.

The slots

00 03 06 09 12 15 18 21 UTC. Log the slot you are in. A missed slot stays missed — do not back-date an observation you did not take.

What to log, and why

Wind **true**, not apparent	apparent changes on every tack; backing-versus-veering only works on true
Pressure **characteristic**	the shape of the last 3 hours, not the amount
Cloud **by level** (low / middle / high)	the warm-front sequence cannot be read from “overcast”
Swell **period**	a long-period swell from a new direction is a system out there
Engine **hours**	maintenance runs on hours, not dates

Sea state (Douglas) and visibility codes

sea		vis	
0 glassy	5 rough	0 under 50 m	5 2–4 km
1 rippled	6 very rough	1 50–200 m	6 4–10 km
2 smooth	7 high	2 200–500 m	7 10–20 km
3 slight	8 very high	3 500 m–1 km	8 20–50 km
4 moderate	9 phenomenal	4 1–2 km	9 over 50 km

Pressure characteristic

0 rising then steady · 1 rising, faster · 2 rising steadily · 3 falling or steady, then rising · 4 steady · 5 falling then steady · 6 falling, faster · 7 falling steadily · 8 steady or rising, then falling

Rules that do not bend

1. **Nothing is edited. Nothing is deleted.** A correction is a new record.
2. **Export regularly.** Browser storage is not a backup — the operating system may reclaim it.
3. **Import merges**, it does not replace: duplicates appear once, new records go in by timestamp, and the merge itself is logged.
4. **Every timestamp is UTC**, whatever the screen shows.
